SUMMARY

Data & Backend Engineer with 3+ years of experience at Deloitte, building production-grade data engineering, backend, and Agentic AI solutions across Logistics, NBFC, Hospital, Telecom, and Audit engagements. Skilled in Apache Spark, Python, SQL, RAG and LLM-based systems, with experience owning solutions end-to-end from requirements and architecture through deployment, while training and mentoring teams and driving delivery.

EXPERIENCE

Deloitte India

India

Assistant Manager Analytics

Jul 2025 – Present

- Architected an AI-powered document intelligence pipeline that extracts structured financial data from multi-page PDFs, using page-level batching to work around LLM context-window limits and consolidating outputs into audit-ready tables.
- Built and operated Python backend services, data pipelines, and RAG-compatible feature layers powering AI-driven audit and analytics platforms, enabling AI-assisted querying and summarization while owning solutions end-to-end from ambiguous requirements through production deployment.
- Led the development of production-grade data and AI solutions across Logistics, NBFC, Hospital, Telecom, and Audit engagements, translating ambiguous business requirements into scalable backend and analytics workflows.
- Led and mentored team members across data engineering and analytics initiatives, driving task allocation, technical training, and delivery oversight to ensure high-quality and timely project outcomes.

Senior Executive Analytics

Jul 2023 – Jun 2025

- Engineered and tuned Apache Spark ETL pipelines, cutting batch processing time by an estimated 75% for high-volume datasets across audit and analytics engagements.
- Authored 15+ reusable SQL, Python, and Scala modules using CTEs and automation logic, expanding business-rule coverage while reducing manual errors and preprocessing effort.
- Developed automated data validation, reconciliation, and transformation workflows using Python, SQL, and Spark to improve data reliability and reduce post-processing effort across analytics workflows.
- Delivered data-driven analytics and automation solutions across Logistics, NBFC, Hospital, Telecom, and Audit engagements, covering financial analysis, exception reporting, reconciliation, and business-rule automation.

Big Data Intern

Jan 2023 – Jun 2023

- Automated backend validation and reconciliation workflows in Python, reducing manual reconciliation effort by an estimated 60–65%, while designing reusable data-quality checks to improve reliability of downstream analytics.
- Integrated 10+ SQL validation rules into Spark pipelines and developed Power BI dashboards for data-driven reporting and visualization, improving data reliability and reducing post-load fixes.

PROJECTS

Agentic AI Audit Automation Platform | Python, LLM Orchestration, PDF Parsing, JSON Pipelines

- Designed an end-to-end reconciliation system comparing balances across PDF documents and CSV datasets for audit confirmation workflows.
- Built a multi-stage AI workflow to extract structured financial data from unstructured PDFs, using state-driven LLM orchestration that explicitly injects extracted data into comparison agents for deterministic, repeatable outputs.
- Developed custom parsing and normalization logic to handle inconsistent naming, formats, and missing values; automated balance-difference calculations with structured JSON output for downstream reporting and UI rendering.

AI-Powered Audit Memo Generator | GCP, GKE, Flask, Vertex AI (Gemini)

- Own an internal AI tool end-to-end that generates audit memos, combining a Flask backend with Vertex AI Gemini models, deployed on Google Kubernetes Engine (GKE).
- Lead infrastructure, deployment pipeline, and production hardening across UAT and production environments during an active platform handover.

TECHNICAL SKILLS

Languages: Python, SQL, Scala

AI / LLM & Agentic Systems: OpenAI APIs, RAG pipelines, Embeddings, Prompt Engineering, State-driven multi-agent orchestration, LLM output validation

Backend & APIs: REST APIs, Flask, FastAPI (working knowledge), Django

Data Engineering & Big Data: Apache Spark, PySpark, ETL/ELT pipelines, PDF parsing, structured/unstructured data extraction, data validation

Cloud & DevOps: Google Cloud Platform, GKE (Kubernetes), Vertex AI, CI/CD, Git

Data & Visualization: SQL, Power BI

CERTIFICATIONS & AWARDS

Google AI Agents Intensive Course (2025) — Google (Kaggle), credentialed

President's Award, FY23 — Deloitte (top 1% of firmwide performers)

Winner — Deloitte National AI/ML Hackathon

2nd Runners Up — Deloitte Agentic AI Hackathon - FY26

EDUCATION

Institute of Technology, Nirma University

B.Tech, Computer Science & Engineering

Ahmedabad, India

2023
