SUMMARY

Data Engineer with 3 years of experience building production-grade data and Agentic AI systems at Deloitte. Strong background in Python backend development, document-driven data pipelines, and AI-ready workflows including RAG, embeddings, and validation layers. Experienced in taking systems from ambiguous requirements to reliable production deployments.

SKILLS

AI / LLM: OpenAI APIs, RAG pipelines, embeddings, prompt engineering
Backend: Python, REST APIs, FastAPI (working knowledge), Django
Data Processing: PDF parsing, Data Validation, structured/unstructured extraction
Distributed Systems: Apache Spark, PySpark, ETL pipelines
Cloud: Azure (hands-on data services)
Others: SQL, Scala, PowerBi, CI/CD

EXPERIENCE

Data & Backend Engineer — Deloitte India

Jul 2023 – Present

- Developed an AI-powered document intelligence solution to extract structured financial data from multi-page PDFs, handling model input constraints through page-level batching and consolidating LLM outputs into audit-ready tables.
- Built Python-based backend services and pipelines powering AI-driven audit and analytics platforms for enterprise clients.
- Engineered and fine-tuned Apache Spark ETL pipelines, slashing batch processing time by 80% for high-volume datasets.
- Authored 25+ reusable SQL, Python, and Scala modules using CTEs and automation logic to expand business rule coverage, cut errors by 30%, and reduce preprocessing by 65%.
- Built RAG-compatible feature layers enabling AI-assisted querying, summarization, and explanations.
- Owned systems end-to-end from requirements to production deployment, balancing speed with reliability.

Big Data Intern — Deloitte India

Jan 2023 – Jun 2023

- Automated backend validation and reconciliation workflows using Python, reducing manual effort by 80%.
- Built reusable data-quality checks improving reliability of downstream analytics and AI outputs.
- Eliminated 80% of manual ETL tasks via Pandas automation, saving ~35 analyst hours weekly.
- Integrated 15+ SQL validation rules into existing Spark pipelines, increasing data reliability and reducing post-load fixes.

PROJECTS

DConfirm (LLM-Based Audit Confirmation & Reconciliation System)

- Designed and implemented an end-to-end reconciliation system comparing balances across PDF documents and CSV datasets.
- Built a multi-stage AI workflow to extract structured financial data from unstructured PDFs.
- Implemented state-driven LLM orchestration by explicitly injecting extracted data into comparison agents to ensure deterministic reconciliation outputs.
- Developed custom parsing and normalization logic to handle inconsistent naming, formats, and missing values, and automated balance difference calculations with structured JSON outputs for downstream reporting and UI rendering.

CERTIFICATIONS

- **AI Agents Intensive Course (2025)** — Google (Kaggle) — [Credential](#)

EDUCATION

B.Tech in Computer Science & Engineering, Institute of Technology, Nirma University

2023

ACHIEVEMENTS

- President's Award FY24 — Deloitte (Top 3% firmwide performers)
- Winner — Deloitte National AI/ML Hackathon
